... your reliable partner!

Portrait

We produce all kinds of tool holders like multiple spindle, angle, and revolver heads that we supply to all renowned machine tool and original equipment manufacturers. We manufacture our high performance apparatus in compliance with the DIN standards for the interfaces specified by our customers. Our range extends from standardised products to world brand solutions from A for ALFRED SCHÜTTE to W for WALDRICH COBURG.

Our collaboration with machine manufacturers starts from a very early phase, so our range is practically ready for the launch of a new machine. We are a single source for the coordination, planning, production, quality assurance, and service. And as a SUHNER subsidiary, we profit from the global presence of our parent company.

Foundation of trust for the close collaboration with machine and original equipment manufacturers.

Thirty years of experience in building machine components

Precision tool holders for turning centres

Whether simple holders for diameter turning tools, complex powered tool holders, or custom machine components – we are your contact.

For all kinds of turning machines, whether sliding lathes, multiple spindles, or horizontal or vertical turning centres, we produce high quality standard tool holders like polygon and revolver heads.

Our range already includes successful components for many brands (see logos on the next page). For a number of world brands, we can also offer whole kits including the receivers, holders, collet chucks, and accessories.

We provide innovative solutions for world brands – from A for ALFRED SCHÜTTE to T for TSUGAMI

Precision tool holders for machining centres

Whether you are a large or small company, you will find our know-how offers you the ideal custom solution for your tool holder needs.

For vertical and horizontal machining centres, we produce high quality tool holders like angle and multiple spindle heads in all of their variants. Our apparatus is responsible for all machining operations from drilling to thread cutting and from sawing to milling.

We have already realised and stock successful components for many brands (see logos on the next page).

Even in tight spaces – we find the solution that fits

SU-matic®

Type: SU-MATIC 1-12000-4
 Part No: 1118100042
 Max Depth: 1.7 (Depth 3, Output 3)
 Max Speed: 4000 RPM-1
 Max Load: 1000kg
 Max Pull: 2000kg
 S/N: 25208

Tool holders for transfer machines

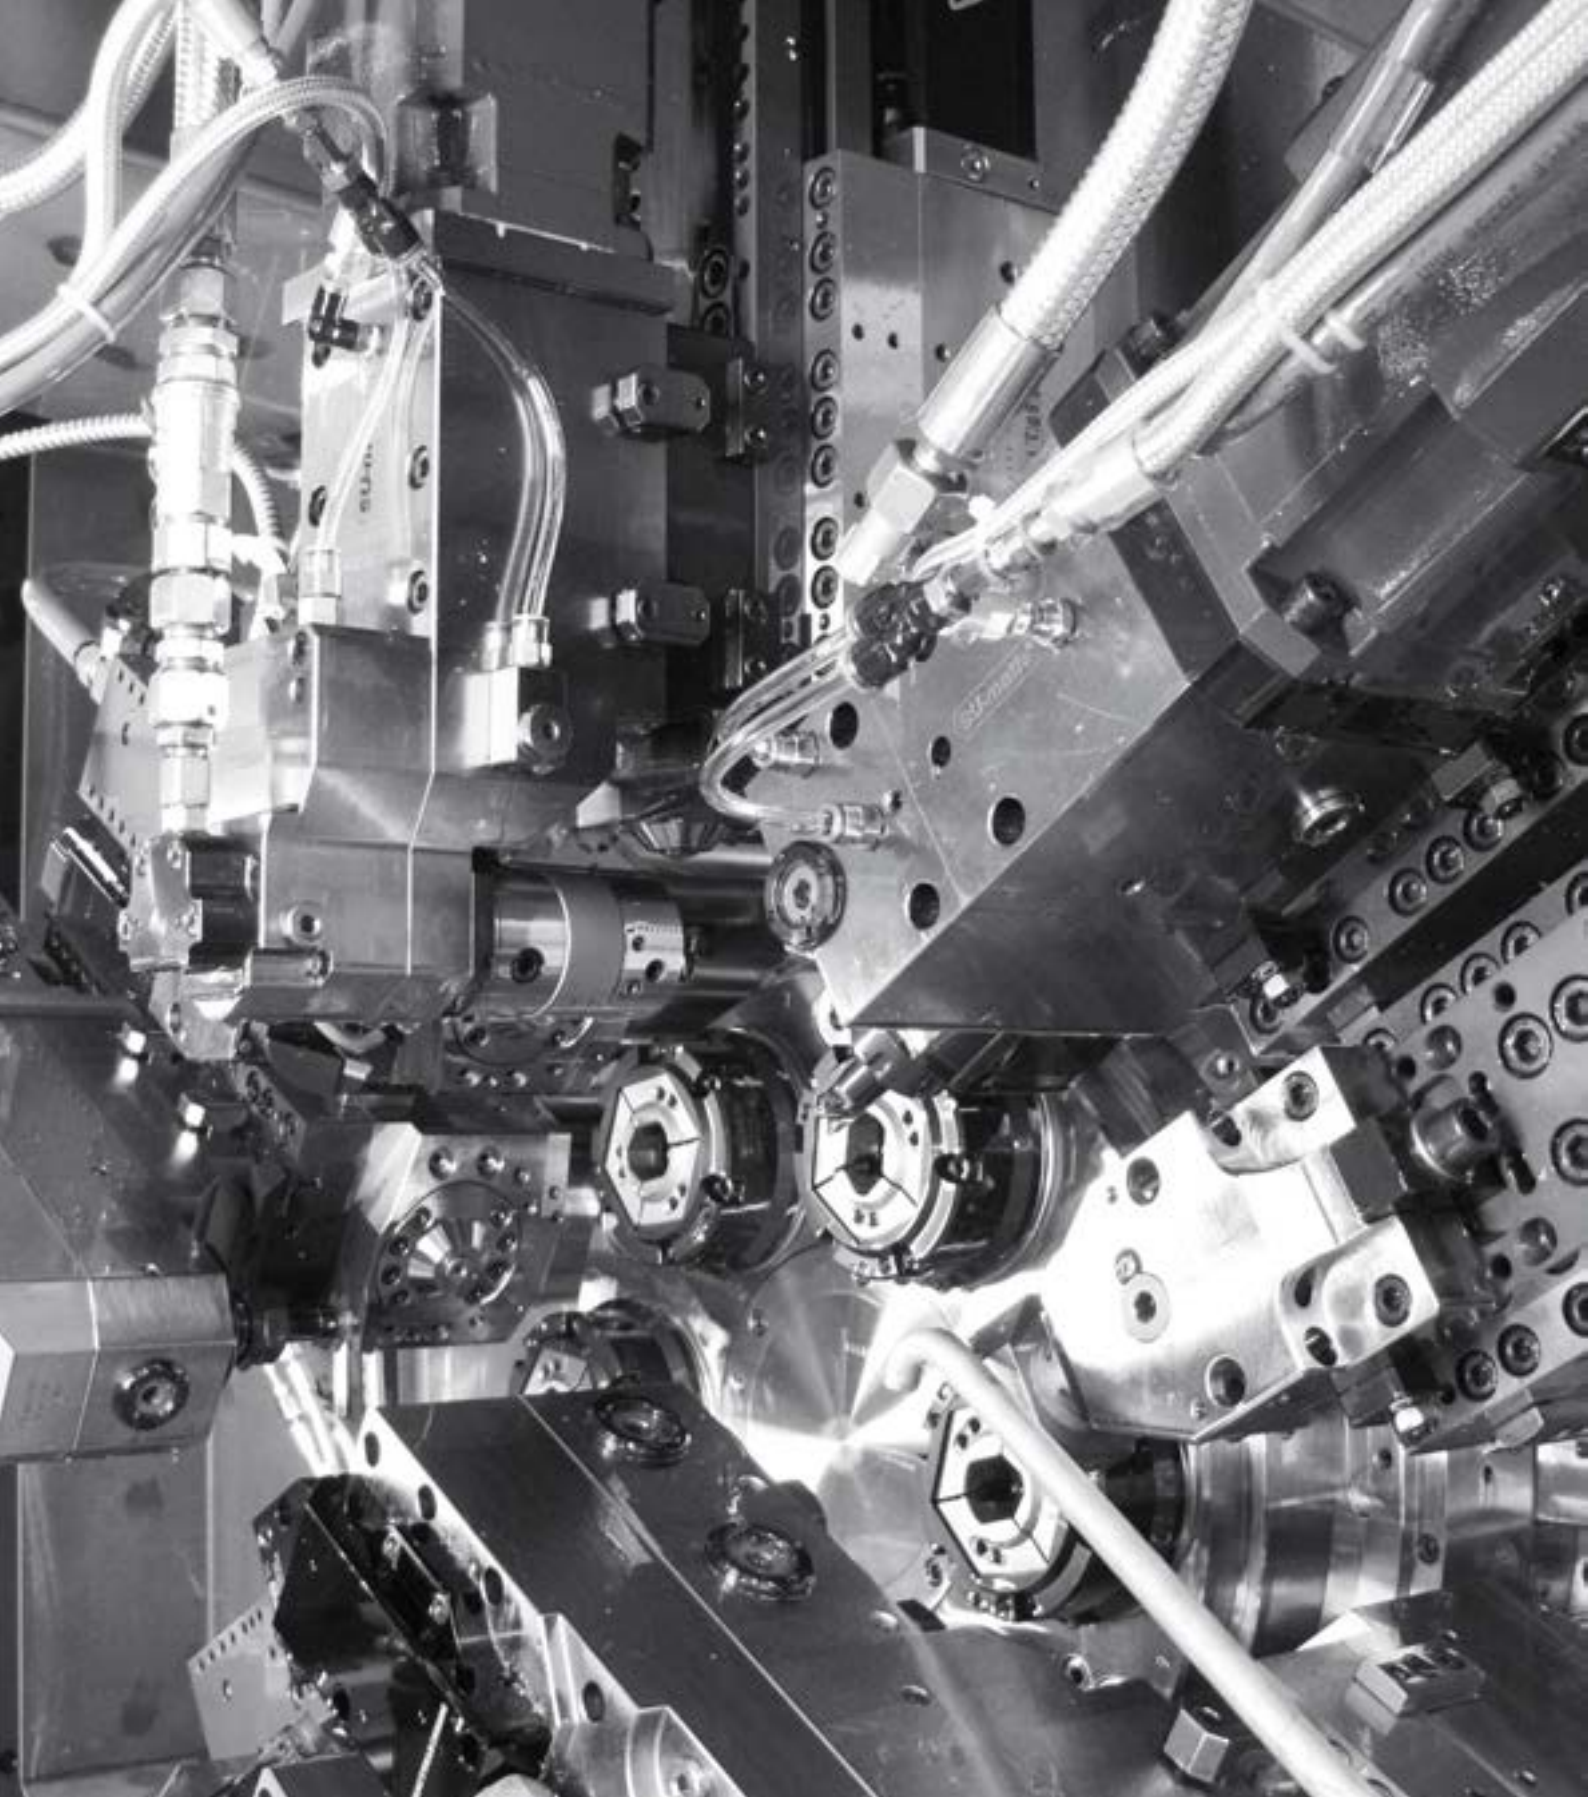

Together we can eliminate those extraneous seconds in your cycle times.

As our customer, you will profit from our close collaboration with the machine manufacturers. No matter whether the tool holder you seek is for a rotary transfer machine or an automatic multiple spindle lathe: Our apparatus can deliver top performance in the tightest of spaces. We have already realised and stock successful components for many brands (see logos on the next page).

Complex cases are our strength

Tool management

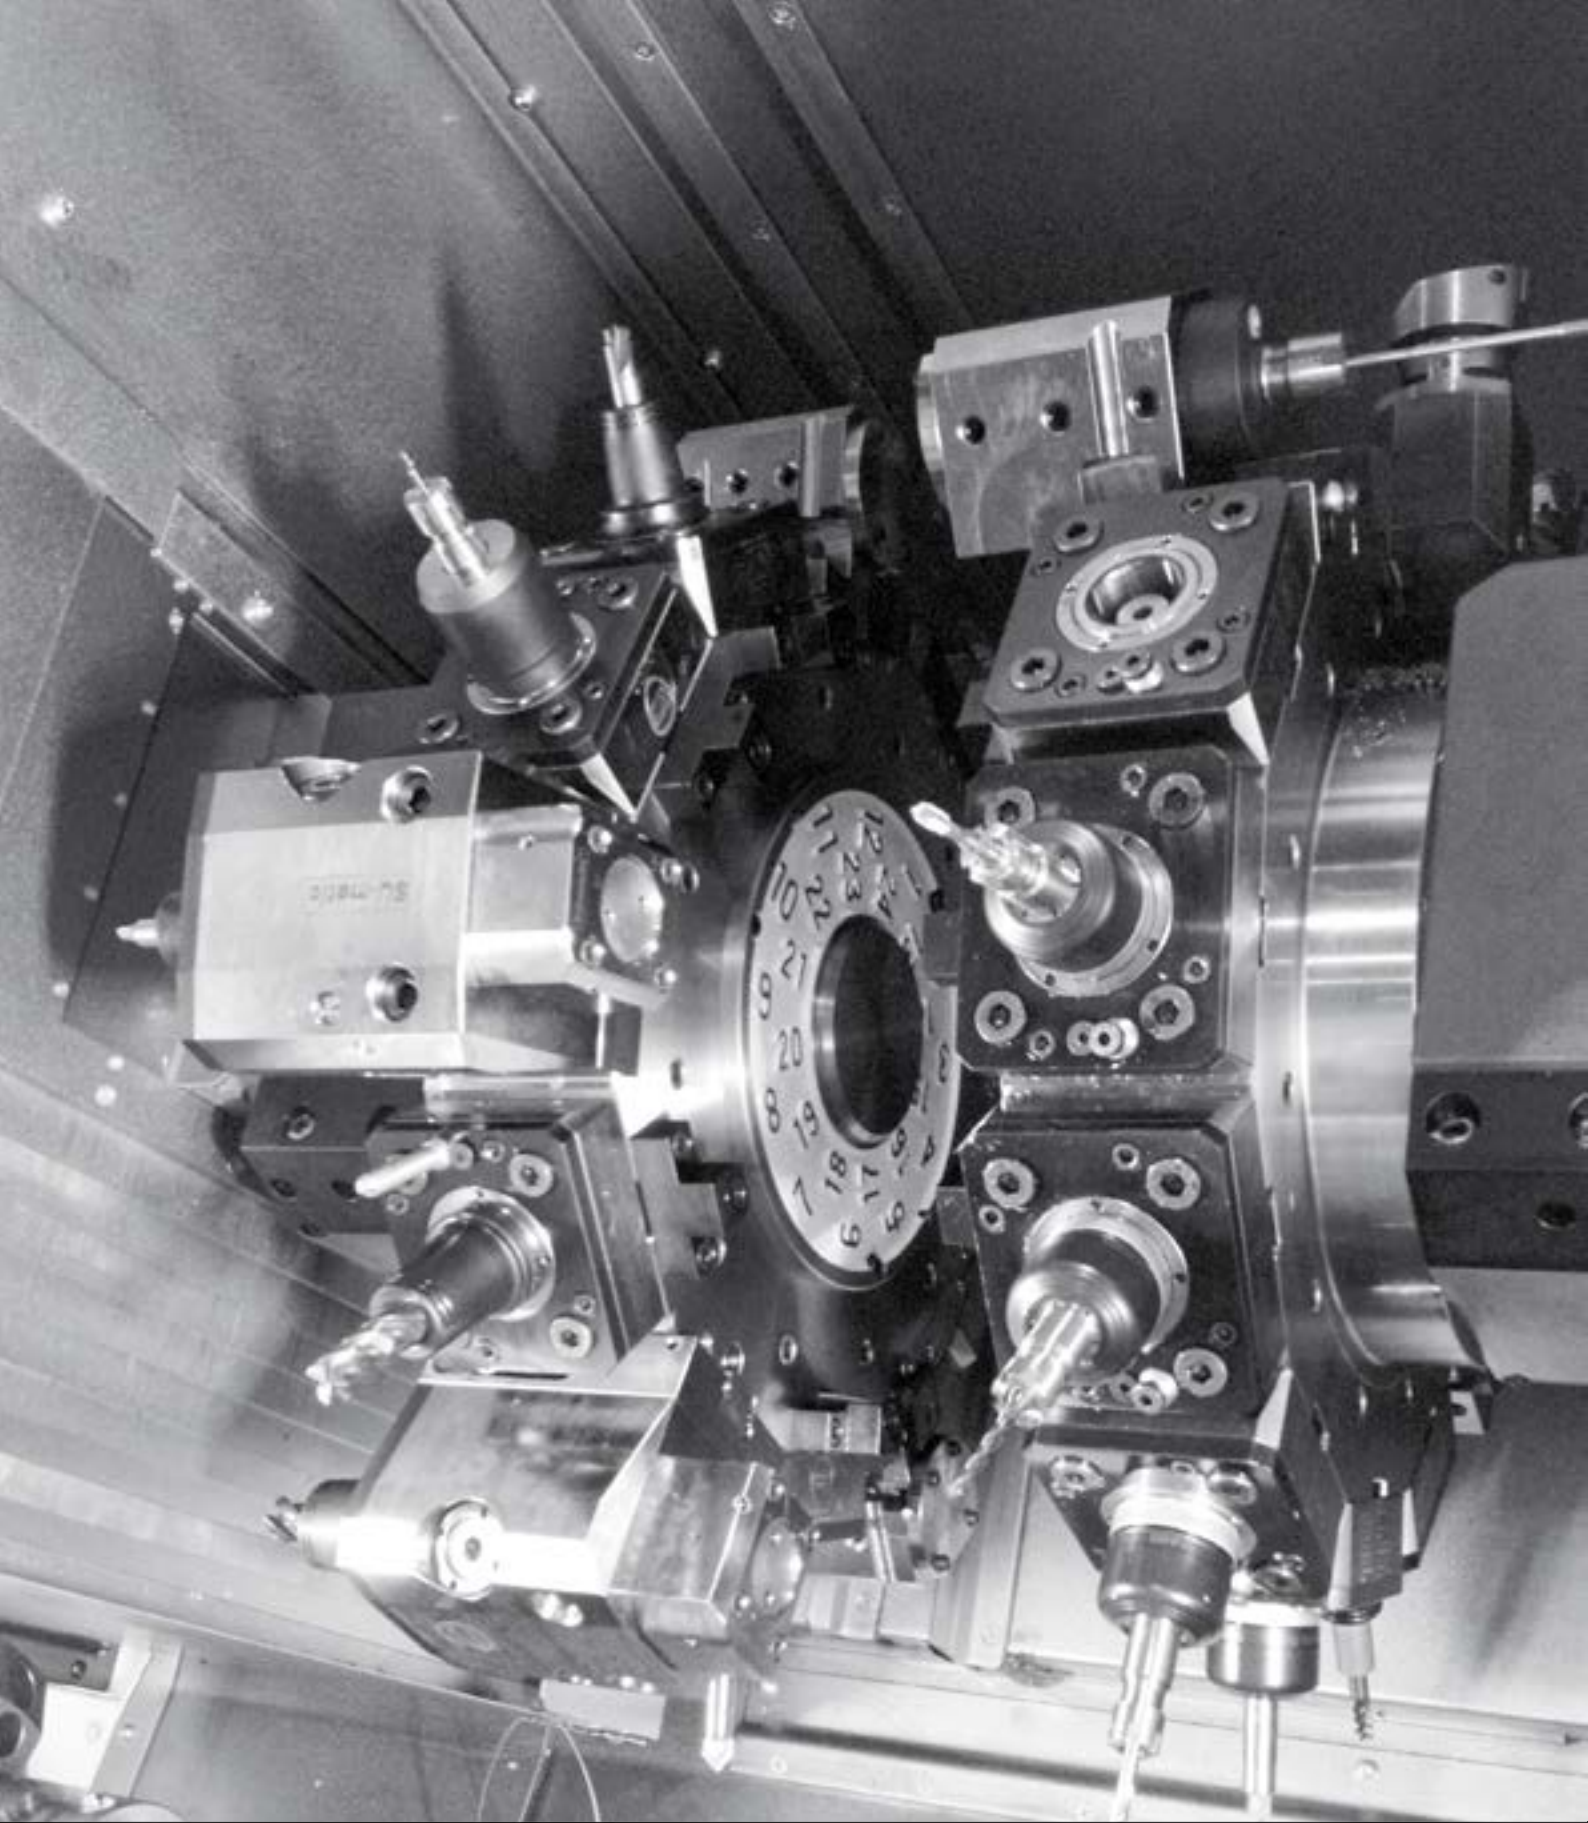

Together with renowned tool manufacturers, we are your expert partner in the OEM field. We can modify our tool holders to meet your requirements. We also master complex problems by finding innovative solutions for cost effective production – together with the tool manufacturers. We have already realised and stock successful components for many brands (see logos on the next page).

You can view our whole range on our website www.su-matic.com. The practical Application Finder will take you directly to the solutions you are looking for: After just two clicks, you will see the SU-matic apparatus that is already operating successfully on the market for your machine and machining operations. Of course, you can also view our products sorted according to machine types.

Our tool holders are tailored to your requirements. The objective is cost effective production.
